

KARAM BINNING

AI Builder · Founder, Binning.AI · Second-year History & Politics, Loughborough

07951 882002 · K.S.Binning1-24@student.lboro.ac.uk · Luton / Loughborough (London-commutable) · Full UK driving licence

Interactive portfolio: *the Binning.AI estate* — link provided in covering email

PROFILE

Second-year (penultimate-year) History & Politics student and self-taught AI engineer. Over four months I taught myself to build and shipped a one-person, AI-native software estate — a multi-agent intelligence platform, autonomous agents running on local models across a private device fleet, a safety-critical legal-research system, and a quantitatively-validated trading engine. I work the way modern AI teams do: design the system, ground every claim in real data, verify before trusting. Seeking an applied-AI / technical internship where that builder's instinct and a humanities analyst's judgement are both useful.

SELECTED WORK — BINNING.AI

Founder & Director, Binning.AI

March 2026 – present

A one-person AI-native company.

- **KAM — a personal intelligence platform** (React 19 · Vite · 40+ modules, fully local). Aggregates live world, financial and OSINT data into one terminal interface with a multi-LLM “council,” in-browser computer vision, and a retrieval-augmented knowledge base. The flagship the rest of the estate is built around.
- **An autonomous agent fleet across seven networked machines.** A director-orchestrator decomposes goals, assigns acceptance-bound tasks to specialist sub-agents, and — critically — **no agent can mark its own work done**: an independent verification gate, not self-reported success. All on local open models (Ollama / llama.cpp), under deterministic supervision.
- **THEMIS — a safety-critical legal RAG.** Hybrid (dense + BM25) retrieval over a structured legal corpus with an *abstention gate* that refuses rather than hallucinate — built after studying how legal AI gets practitioners sanctioned, and implementing the mitigations. Local-only for privacy.
- **A validated trading engine.** A multi-agent Polymarket engine (+113% on paper over 289 trades) and an in-play sports model whose edge I validated with **closing-line value and Brier score**, not just P&L — the variance-resistant test of real edge.
- **An automated lead-generation & job-application pipeline** (Python, OpenStreetMap, local-LLM classification) — national-scale business intelligence feeding a postcard-website outreach product.

Stack across the estate: React 19 / TypeScript / Three.js · Python / FastAPI · Ollama, llama.cpp, local LLMs · multi-agent orchestration · RAG · Tailscale-meshed distributed systems · systemd.

EDUCATION

Loughborough University — BA History & Politics

2024 – 2027 · penultimate year (final year from Sept 2026)

First-class module work: African States & Nations **70**, Politics of Development **66**, International Political Theory **66**, The Making & Unmaking of the World Order **65**, Theories & Methods in Political Research **65**.

Planned final-year dissertation: an AI-assisted platform for civilian geopolitical & security analysis in peace and conflict — *KAM built as the dissertation's analytical instrument*, bridging the software and the scholarship.

Harlington Sixth Form, Luton

2022 – 2024

A-Levels: Psychology (B), Criminology (B), Media Studies (B) · **Head Student** of Sixth Form & Upper School.

EXPERIENCE

Buy Sell and Loan (Questar Ltd), Luton — Team Member

2024 – present

Regulated retail dealing in high-value electronics, jewellery and luxury goods. High-value item assessment and valuation; regulatory-compliant record-keeping; cash handling; trust-based repeat-customer relationships; independent operation across the store.

Pret A Manger, Luton Airport (airside) — Team Member

2022 – 2024

One of Pret's highest-footfall UK sites. Fast, accurate high-volume service to an international clientele; **self-initiated barista training above grade**; ran the kiosk independently (sales, stock/FIFO, hygiene, closing) with no managerial assistance.

~5 years of continuous customer-facing work alongside full-time education.

SKILLS

AI / technical: Claude & Claude Code (primary) · multi-agent design & orchestration · prompt & context engineering · retrieval-augmented generation (hybrid, abstention) · local-model deployment (Ollama, llama.cpp) · Python (AI-assisted development) · React 19 + Vite · Linux CLI & networking · calibration/eval discipline (CLV, Brier).

Analytical / research: OSINT methodology (multi-source verification, structured synthesis) · research design · written analysis to deadline · university-level political analysis.

Operational: regulated cash handling & compliance · high-volume customer service · reliability under pressure.

INTERESTS

AI as a structural force in geopolitics · dual-use technology & access asymmetry · the emerging agent economy · post-colonial political economy · the space between peace and war (dissertation terrain).
