KARAM BINNING

Final-year BA History & Politics, Loughborough University · Independent AI builder

K.S.Binning1-24@student.lboro.ac.uk · karambinning@gmail.com · 07951 882002
Luton / Loughborough (London-commutable) · UK national · Full UK driving licence
Portfolio: karambinning.github.io/portfolio
Available: December 2026 – January 2027 · Summer 2027 (planning a taught master's in International Security, 2027–28)

PROFILE

Final-year History and Politics student who builds working AI systems. Since March 2026, with no programming background and Claude as my primary instrument, I have designed and shipped autonomous flight software, a multi-agent infrastructure across a private fleet of machines, and intelligence tooling — alongside a full degree. Academically I work on conflict, security and the international order; technically, on AI systems that verify before they claim. I am looking for an internship where both halves are useful: applied AI, technology and security policy, intelligence analysis or research.

SELECTED WORK — BINNING.AI *(independent, March 2026 – present)*

ICARUS — autonomous flight software for a DJI Mini 2

- Turned a consumer drone into an autonomous reconnaissance aircraft, with a 2019 Android handset as flight computer, on my own software and at zero cost.
- 11,615 lines of Java across fourteen classes; 365 self-test assertions run on the physical handset at every launch and have repeatedly caught regressions before flight.
- The control law carries its own safety envelope because the airframe has no obstacle sensing. Three crashes documented with the fault each exposed; one feature paused on a measured physical limit (the camera cannot resolve a hand beyond 5.8 m) rather than shipped on a guess.

Agentic infrastructure — the system the work runs on

- A private mesh of four Macs, with a single command centre and a 12 TB canonical archive of every project, session and note.
- A dedicated intelligence node with collectors across open-source intelligence, news, geopolitical signal, market data and careers.
- Agents run as Claude Code sessions — director, scout, builder, reviewer, archivist — under a deterministic supervisor that probes every node every sixty seconds and restarts what has failed. One rule throughout: **no agent may mark its own work complete.**

AI Declaration System — academic transparency tooling

- Built in Claude Code to govern my own academic AI use: logs how AI was involved in a piece of work and generates a declaration page for the front of the submitted essay. Designed to sit inside Loughborough's AI-use guidelines.

KAM — a "human operating system" (concept stage, pre-beta)

- Around twenty-five modules behind a central hub, including WORLD, a layered model of the planet with a temporal slider through migration, empire and war, and a Council that convenes strategic, economic, legal and ethical perspectives on a decision while the user remains the one who decides.
- Interfaces and navigation built; intelligence and data layers still largely scaffolding. Hosts my dissertation's predictive model.

Future Warfare — a civilian security curriculum inside KAM

- Six modules (cyber security, AI defence, autonomous systems, space, drones, pilot training) on the premise that the modern conflict surface reaches civilians first. Tested on myself: paired red-team and blue-team drills against my own infrastructure, including brute-force attempts on my own SSH.

Polymarket War Room — paper-traded market engine

- Three bot configurations on five-minute crypto markets. Best: $50 → $106.56 (+113%) over 289 trades at a 64.7% win rate — paper-traded, no capital at risk. I then wrote the assessment showing the result does not transfer to other market classes, and kept only the portable finding.

Method across all of it: instrument before theorising, verify before trusting, let the measurement close the argument.

EDUCATION

Loughborough University — BA (Hons) History & Politics · 2024 – 2027, final year

- Selected marks: African States and Nations **70** · Politics of Development **66** · International Political Theory **66** · British India, 1857–1947 **65** · The Making and Unmaking of the World Order **65** · Theories and Methods in Political Research **65**.
- Final-year modules: Dissertation · The Soviet Security State · After Empire: South Asia · International Conflict Management · French.
- **Dissertation (in progress):** *Great Power War as a Process* — major conflict read as a long structural process rather than a dated event, tested with a predictive model built for civilian geopolitical and security analysis.
- Declared AI use from the start: for British India I used Claude to build a reading guide, wrote the essay entirely myself, and stated the AI involvement on the front page.
- Planning a one-year taught master's in International Security, 2027–28.

Anthropic Academy · AI Fluency for Students · AI Fluency: Capabilities and Limits · AI Fluency: Framework and Foundations (all completed)

Harlington Upper School & Sixth Form, Central Bedfordshire · A-Levels: Psychology (B) · Criminology (B) · Media Studies (B) · 9 GCSEs

LEADERSHIP

Head Student, Sixth Form and Upper School — Harlington · 2023 – 2024

- Elected by staff to lead the student leadership team; the link between students and senior staff.
- Planned and delivered the school's major events across the year, including prom and leavers' day.
- Represented the school publicly: open-day speeches to prospective students, a community residents' tea party I hosted, and visits from politicians.
- Organised and fronted a Movember fundraiser end to end, raising **£750 — the most any single student has raised for the school.**

EMPLOYMENT

Team Member — Bargain Booze, Loughborough · 2026 – present

Licensed retail alongside my final year: customer service, restocking and store presentation.

Team Member — Buy Sell and Loan (Questar Ltd), Luton · 2024 – present

Regulated retail in high-value electronics, jewellery and luxury goods: item valuation, compliant record-keeping, cash handling and independent operation across the store.

Team Member — Pret A Manger, Luton Airport (airside) · 2022 – 2024

One of Pret's highest-footfall UK sites: high-volume service under time pressure, barista training taken on above grade, and the kiosk run independently through to closing.

SKILLS

AI / technical: Claude and Claude Code · multi-agent orchestration · prompt and context engineering · retrieval-augmented generation · Python and Java (AI-assisted) · evaluation and self-test discipline · Linux, networking and self-hosted infrastructure.

Research / analysis: OSINT methodology and multi-source verification · research design · structured synthesis · written analysis to deadline.

Languages: English (native) · French (learning, final-year module — not yet working proficiency)

INTERESTS

AI as a structural force in geopolitics · AI sovereignty and the UK's position · dual-use technology and access asymmetry · cybersecurity, intelligence and diplomacy · the Cold War · the space between peace and war.
